OTHER INFORMATION: Description of the artificial sequence: peptide E6 130-144
                                                                                         APPLICANT: COMMISSARIAT A L'ENERGIE ATOMIQUE
APPLICANT: COMMISSARIAT A L'ENERGIE ATOMIQUE
APPLICANT: MAILIERE, BETTART
APPLICANT: MAILIERE, BETTART
APPLICANT: MAILIERE, BETTART
APPLICANT: BOURGAULT-VILLADA, Isabelle
APPLICANT: BOUVEGLE-MORATILLE, Sandra
APPLICANT: GUILLET, Jean-Gerard
TITLE OF INVENTION: Mixture of peptides derived from E6 and/or E7
TITLE OF INVENTION: Mixture of peptides derived thereof
FILE REFERENCE: 45636-5071-US
CURRENT APPLICATION NUMBER: US/10/476,570
CURRENT FILING DATE: 2003-11-04
FRIOR FILING DATE: 2002-05-03
FRIOR FILING DATE: 2001-05-04
NUMBER OF SEQ ID NOS: 63
SOFTWARE PATENTING VET: 2.1
Sequence 43, Application US/10476570; Publication No. US20040170644A1; GENERAL INFORMATION:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            TYPE: PRT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              [dd
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 4, Application US/08316239B
Patent No. 5679509
GENERAL INFORMATION:
APPLICANT: Wheeler, Cosette M.
APPLICANT: Parmenter, Cheryl A.
TITLE OF INVENTION: Methods and a Diagnostic Aid for
TITLE OF INVENTION: Distinguishing a Subset of HPV that is Associated with an TITLE OF INVENTION: Increased Risk of Developing Cervical Dysplasia and TITLE OF INVENTION: Cervical Cancer
NUMBER OF SEQUENCES:
ACCRESPONDENCE ADDRESS:
ADDRESSEE: Jagitani & Associates
STREET: Glize Rocky Way Court
CITY: Centreville
                                                                                                                                                                         Query Match 100.0%; Score 56; DB 1; Length 162; Best Local Similarity 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 3, Application US/08116239B
Patent No. 5679509
GENERAL INFORMATION:
APPLICANT: Wheeler, Cosette M.
APPLICANT: Parmenter, Cheryl A.
TITLE OF INVENTION: Methods and a Diagnostic Aid for
TITLE OF INVENTION: Distinguishing a Subset of HPV that is Associated with an TITLE OF INVENTION: Increased Risk of Developing Cervical Dysplasia and TITLE OF INVENTION: Cervical Cancer
NUMBER OF SEQUENCES: 4
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

i Sequence 12, Application US/09359382

i Patent No. 6306397

i GENERAL INPORMATION:

APPLICANT EDWARDS, Stirling John

APPLICANT: COX, John Cooper

i APPLICANT: COX, John Cooper

i APPLICANT: WEBB, Elizabeth Ann

APPLICANT: FRAZER, Ian

i TITLE OF INVENTION: VARIANTS OF HUMAN PAPILLOMA VIRUS ANTIGENS

i TITLE OF INVENTION: VARIANTS OF HUMAN PAPILLOMA VIRUS ANTIGENS

i FILE REFERENCE: 017227/0148

CURRENT FILING DATE: 1999-07-23

EARLIER APPLICATION NUMBER: US 08/860,165

EARLIER FILING DATE: 1995-10-22

i EARLIER FILING DATE: 1995-12-20

i EARLIER FILING DATE: 1994-12-20

i SEQ ID NO 12

i LENGTH: 172

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 8, Application US/09980523A

Patent No. 6783763

GENERAL INFORMATION:
APPLICANT: CHORPIN, JEANNINE
APPLICANT: CHORPIN, JEANNINE
APPLICANT: GUILLET, JEAN-GERARD
APPLICANT: GUILLET, JEAN-GERARD
APPLICANT: CONNAN, FRANCINE
APPLICANT: CONNAN, FRANCINE
APPLICANT: CONNAN, FRANCINE
TITLE OF INVENTION: POLYEPITOPIC PROTEIN FRAGMENTS OF THE E6 AND E7
TITLE OF INVENTION: PRATICULARLY IN VACCINATION
FILE REFERENCE: WOB1 AO INS
CURRENT APPLICATION NUMBER: US/09/980,523A
CURRENT APPLICATION NUMBER: PCT/FROO/01513
FRIOR FILING DATE: 2000-05-31
FRIOR FILING DATE: 2000-05-31
FRIOR FILING DATE: 2000-05-31
FRIOR FILING DATE: 2000-05-31

Publication No. US20040170644A1

GENERAL INFORMATION:

APPLICANT: COMMISSARIAT A L'ENERGIE ATOMIQUE

APPLICANT: INSTITUT NATIONAL DE LA SANTE ET DE LA RECHERCHE MEDICALE

APPLICANT: BOUNGAULT-VILLADA, Isabelle

APPLICANT: POUVELLE-MORATILLE, Sandra

APPLICANT: GUILLET, Jean-Gerard

TITLE OF INVENTION: Mixture of peptides derived from E6 and/or E7

TITLE OF INVENTION: Mixture of peptides derived from E6 and/or E7

TITLE OF INVENTION: DELLA SANTE E7

FILE REFERENCE: 45636-5071-US

CURRENT APPLICATION UNBER: US/10/476,570
                                                                                                                                                                                                                                             ## CENTREAL INFORMATION:

"Interaction of oncogenic papillomavirus E6 proteins with fibulin-1.",

"Interaction of oncogenic papillomavirus E6 proteins with fibulin-1.",

Biochem Biochem B. Commun. 296:962-969(2002).

-I- FUNCTION: This protein has transforming activity in vitro.

-I- FUNCTION: Exhibits a strong, but non specific affinity for double stranded DNA (in vitro).
 -!- SUBUNIT: Interacts with FBLNI.
-!- SUBCELLULAR LOCATION: Nuclear matrix-associated.
-!- MISCELLANEOUS: HPV16, in comparison to HPV types 6 and 11, is more often associated with malignant genital cancers in humans.
 [3] INTERACTION WITH FBLAI, AND INHIBITION OF E6-MEDIATED TRANSFORMATION. MEDLINE=22188366; PubMed=12200142; DOI=10.1016/S0006-291X(02)02041-7;
